1 Introduction

Finder is a plug-in for searching transcriptions into TextGrid files in Praat. Once a text is found, users can choose between visualize or extract those specific parts of the TextGrid file.

2 How to install

2.1 Windows

2.2 Linux

2.3 MAC

3 Getting started

3.1 Create an index

The first thing to do is creating an index. By doing so, the plug-in will read the information contained in your TextGrid files and store it internally. This process will capture the state of your annotations at a given time. So, if later, a TextGrid is modify, it is important to run this command again, in order to include the new changes.
